Art Unit: 1793

Applicant's response filed 4-22-2009 has been carefully considered. The rejections of the previous office action are withdrawn. A new search has been made and an additional reference relevant to the instant claims found.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6, 8-10, 13, 15-21, 23-25, 28-31, 33, 34, and 36-40 are rejected under 35 U.S.C. 102(b) as being anticipated by Nordmark et al (Published Sept. 1, 2002)

Nordmark teaches a method of making a starch product starting with materials falling within the scope of amylose content and molecular weight of the instant claims (see, section 2.1) by mixing 30% starch raw material and (apparently tap) water, heating the mixture to 180 C and rapidly cooling it to 10 C (section 2.2 and 3.1), samples were stored for 2 days (section 3.1), dried and subject to microscopy (section 2.3). The product obtained exhibits crystalline spherulites of starch. The prior art products being made from similar starting materials and being treated by a similar process would be expected to exhibit similar properties compared to that of the instant invention.

Claims 7, 11, 12, 14, 22, 26 and 32 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
